Professional Summary

Full Stack Engineer with 5 years of experience designing, developing, and deploying enterprise web applications using **React.js**, **Next.js**, **TypeScript**, **Node.js**, **Express.js**, **PostgreSQL**, and **AWS**. Experienced in building scalable frontend applications, secure **REST APIs**, enterprise integrations, and cloud-based solutions with a strong focus on performance, maintainability, security, and user experience. Proven track record of delivering business-critical software, optimizing application performance, and collaborating with global cross-functional teams throughout the complete software development lifecycle in Agile environments.

Skills

- **Languages:** TypeScript, JavaScript (ES6+)
 - **Frontend:** React.js, Next.js, Redux Toolkit, React Hooks, Context API, HTML5, CSS3, Tailwind CSS
 - **Backend:** Node.js, Express.js, REST APIs, JWT Authentication, OAuth 2.0, API Integration
 - **Cloud & Devops :** Docker, AWS, GitHub Actions
 - **Database & ORM:** PostgreSQL, MongoDB, Redis, Drizzle ORM, Mongoose
 - **Testing & Tools:** React Testing Library, Jest , Jira, Agile Scrum, Git, GitHub
 - **Familiar with :** Kubernetes, Kibana, ServiceNow, GraphQL
-

Professional Experience

Full Stack Engineer | Capgemini | Aug 2022 – Jun 2026

Enterprise Risk Intelligence & Compliance Analytics Platform *(Global Energy & Industrial Manufacturing Client)*

Tech Stack: React.js, TypeScript, Next.js, Redux Toolkit, RTK Query, Node.js, Express.js, PostgreSQL, REST APIs, AWS (S3, CloudFront, App Runner, Lambda), GitHub Actions, Git, Agile Scrum

- Developed a greenfield enterprise Risk Intelligence & Compliance platform that centralized fragmented compliance reporting by aggregating data from multiple enterprise systems to identify Key Risk Indicators (KRIs) across 160+ business applications used by over 100 global business users.
- Built secure role-based dashboards, reporting, exception management, approvals, notifications, and user administration modules using React.js, Node.js, REST APIs, PostgreSQL, and SSO authentication to streamline enterprise compliance workflows.
- Designed scalable backend services integrating Oracle, SQL Server, PostgreSQL, and SQL Views, delivering optimized APIs for dashboards, advanced search, audit reporting, Excel exports, and workflow automation.
- Improved application performance by implementing server-side pagination, indexed filtering, debounced search, lazy loading, memoization, and API response caching, enabling responsive handling of large compliance datasets.
- Automated CI/CD using GitHub Actions, deploying frontend applications to Amazon S3 and CloudFront, backend services to AWS App Runner, and AWS Lambda functions for scheduled data processing, report generation, backup creation, data retention, and auto-reprocessing of compliance data.
- Collaborated with stakeholders throughout Agile Scrum delivery, contributing to solution design, sprint planning, UAT, production releases, and post-production support for business-critical enterprise applications.

RPA Automation Developer | Capgemini | May 2021 – Nov 2022

Tech Stack: Python, UiPath, SQL Server, Pandas, OpenPyXL, SQLAlchemy, BMC Remedy

- Led a team of three analysts, driving technical solution design and process improvements to enhance service reliability and streamline enterprise support operations.
 - Designed and implemented Python- and UiPath-based solutions for SAP reporting, application monitoring, and business workflows, reducing report generation time from 3+ hours to 15 minutes while saving 25+ hours of manual effort per month.
 - Built automated reporting and monitoring pipelines using Python, SQL Server, and Pandas, integrating enterprise systems with BMC Remedy to improve incident visibility, reporting accuracy, and reduce operational downtime by 15%.
 - Performed root cause analysis on recurring production issues and delivered scalable solutions that improved system reliability, reduced repetitive manual work, and enabled support teams to focus on incident resolution and business-critical operations.
-

Personal Project

Zenviv – Modular Health & Wellness Platform

Tech Stack: Next.js, TypeScript, Node.js, Express.js, PostgreSQL, Drizzle ORM, Tailwind CSS, JWT

- Developed a full-stack health and wellness platform enabling users to create personalized workout and nutrition plans, track fitness goals, and monitor progress through interactive dashboards.
 - Implemented secure JWT-based authentication and role-based access control (RBAC) for community management, supporting Admin, Trainer, and Member roles with protected routes and permission-based access across frontend and backend services.
 - Designed scalable REST APIs and relational data models for workout planning, nutrition management, progress tracking, user profiles, community channels, and merchandise management using Node.js, Express.js, PostgreSQL, and Drizzle ORM.
 - Built reusable frontend architecture with Next.js and TypeScript, delivering responsive dashboards, dynamic forms, and modular UI components to improve maintainability, scalability, and developer productivity.
 - Designed the platform with modular feature boundaries supporting authentication, fitness, community, and merchandise modules, providing a scalable foundation for future SaaS expansion and independent feature development.
-

Education

Bachelor of Engineering (Electrical Engineering)
G H Rasoni College of Engineering, Nagpur

8.38 CGPA
Jun 2021
